DETAILED ACTION

Allowable Subject Matter

Claim 1-24 are allowable.

Claims 1-24 are allowable over the prior art of record for at least the reason that even though the prior art discloses FP interferometers comprising a single actuator for changing the distance between the two plates or mechanical means associated with each of the two plates to move the two plates independently, the prior art fails to teach or reasonably suggest, regarding claims 1-13, a device comprising a first electromechanical transducer which is associated with the top and bottom plates and a second electromechanical transducer which is associated with the bottom plate, wherein the second relative displacement is substantially independent of the first relative independent, regarding claims 14-20, a method of tuning a resonant cavity of an FP interferometer comprising using a first and a second transducers to independently change a distance between the top and bottom plates, and regarding claims 21-24, an apparatus for fine tuning a resonant cavity of an FP interferometer, comprising first and second transducer means for independently changing a distance between the top and bottom plates, as set forth by the claimed combination.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dr. Leo Boutsikaris whose telephone number is 571-272-2308.
